Sequence 198, Application US/09954385

Publication No. US2000100467A1

GENERAL INFORMATION:

APPLICANT: Abrie, Wolfgang

APPLICANT: Baldwin, Toby L.

APPLICANT: Wang Gastel, Franciscus J.C.

APPLICANT: Wang Huaming

APPLICANT: Wang Huaming

APPLICANT: Wang Huaming

TITLE OF INVENTION: Binding Phenol Oxidizing Enzyme-peptide

TITLE OF INVENTION: Binding Phenol Oxidizing Enzyme-peptide

TITLE OF INVENTION: Complexes

TITLE OF INVENTION: WANBER: US/09/954,385

CURRENT FILIK DATE: 2001-09-12

NUMBER OF SEQ ID NOS: 433

SOFTWARE: PastSEQ for Windows Version 4.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 55, Application US/08787547

Patent No. 5783567

GENERAL INFORMATION:
APPLICANT: Hedley, Mary Lynne
APPLICANT: Langer, Yoanne M.
APPLICANT: Langer, Robert S.
TITLE OF INVENTION: MICKOPARTICLES FOR DELIVERY
TITLE OF INVENTION: OF NUCLEIC ACID
NUMBER OF SEQUENCES: 107

CORRESPONDENCE ADDRESS:
ADDRESSE: Fish & Richardson, P.C.
STREET: 225 Franklin Street
CITY: Boston
STATE: MA
COUNTRY: US
ZIP: 02110-2804

COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER: IBM Compatible
COMPUTER: IBM Compatible
